

Care Tips for Your New Glasses

Your new eyewear is an important investment in your well-being and appearance. Follow these helpful tips to maintain the best fit and performance from your new eyeglasses.

1. It is normal to experience a short period of adaptation to your new eyeglass prescription. Please contact our office if you have difficulty adjusting to your new glasses.
2. You will both see better and look better if your glasses are in proper alignment. New frames tend to “settle” during the first few days of wear, due to body heat and the newness of the materials. You may visit our office at any time if additional adjustments are needed.
3. Your glasses have been professionally adjusted specifically for you. Allowing others to wear your glasses can cause misalignment of your frame and prescription.
4. Use two hands to put on and remove your glasses to reduce wear on the frame. Never lay your glasses down on the lens surface as this may cause scratches. When not wearing your glasses, you should place them in their protective case.
5. Clean your glasses regularly with an approved eyeglass lens cleaner or with warm water and dry with a soft cotton cloth. Specially designed lens cloths and lens cleaners are available to purchase through our office. You should avoid using paper towel or tissue as this can cause scratches.
6. You should periodically have the fit of your glasses checked and adjusted by a certified optician to maintain optimum performance.

Please remember that adjustments and cleanings are always complimentary at our office!
